

PUBLIC OPEN HOUSE:

Overview of independent research on air quality and noise impacts from oil and gas development in the Eagle Ford Shale.

The Health Effects Institute Energy (HEI Energy), a nonprofit organization, is funding independent research on how unconventional oil and gas development impacts air quality and noise in the Eagle Ford Shale.

Research is underway in and near Karnes City, TX, and the research teams funded by HEI Energy are hosting an in-person open house for all interested individuals to learn more about this research.

★ Location of stationary measurement site at 1100 East Main Avenue, Karnes City

THE OPEN HOUSE WILL PROVIDE AN OPPORTUNITY TO:

- **Learn about the air quality research**, its purpose and ways that you can engage and stay up-to-date.
- **Meet the research teams** from the University of Texas at Austin, Texas A&M University and the University of Southern California.
- **View posters illustrating the research** and what you can expect while it is underway.
- **See some of the equipment in action** which the teams are using to detect oil and gas emissions and noise.
- **Interact with research teams directly**, ask questions about the research, and share any ideas or concerns.
